Details

Highest Performance in the smallest space

Do you have problems to read weak signals? Or how about boosting a probes gain or maybe pre-amplifying an rf antenna. The UBBV is the answer to all these needs as well as many others.

The UBBV is a high-end Pre-Amplifier which works with any brand of Spectrum Analyzers and directly fits to any Aaronia SPECTRAN Handheld Analyzer.

Since the UBBV has such a high compression point of amlost 100 milliwatts, you can even use it to boost the power of small micro transmitters. Newly designed microwave chips enable the UBBV2 to have gain even up to 30GHz.

The UBBV series enables maximum performance, particularly when measuring extremely weak signals e.g. in typical EMC test according to EN55022, EN55011 and so on.

The transport case offers enough space for the preamp & accessories
