Introduction

Pure RF performance

The SPECTRAN® V6 Command Center is the culmination of Aaronia's efforts in building the epitome of a Spectrum Analyzer Battleship: It scans 6 GHz in less than 1 millisecond, equaling an astonishing speed of 4THz per second.

This high-end spectrum analyzer offers all the RF performance you need, and provides every measurement detail necessary at the same time.

Perfect for any RF Problem

The setup is completely customizable, and – thanks to its cascadable system – can be combined with up to four independent analyzers.

Two 24" 4K widescreen displays capture and visualize a instantaneous bandwidth (complex I/Q) of up to 980 MHz (I/Q) , with a remarkable POI of 10ns (I/Q). Moreover, with up to 18 TB hard drives, you have virtually unlimited recording time.

Hardware

Our Command Center has a wide measuring range of 10MHz to 6 GHz and includes up to four receivers (8 x 2GSPS 16 Bit I/Q-data) and four vector signal generators (4 x 2GSPS 14-Bit I/Q).

In terms of hardware, the computer features the best components available. The SPECTRAN® V6 Command Center runs on the AMD Ryzen 9 5900X (12Core) processor (opt. AMD Ryzen Threadripper 3960X (24Core), with 64 GB DDR4 RAM and an Nvidia GTX 1660 Ti graphics card allowing for gapless streaming and playback.

Made in Germany

Last but certainly not least, our SPECTRAN® V6 Command Center is made in Germany, ensuring highest quality standards throughout the entire value chain.

Scope of delivery

- SPECTRAN® V6 Command Center
- Padded rolling case to move SPECTRAN V6® Command Center with ease
- Pre-installed spectrum analysis software RTSA-Suite PRO

The SPECTRAN® V6 Command Center comes with an extensive scope of options from which to choose. Catering to individual user needs, the delivery can be extended to include various additional products.

Options

Option 0002: 5 ppb (0,005 ppm) OCXO Time Base

Our highly precise OCXO time base, especially developed for and adjusted to the SPECTRAN® series, offers significantly reduced phase noise (jitter). This allows for the use of far narrower filters, which in turn vastly enhances sensitivity. In order to use maximum sensitivity, then, this is an indispensable option. Furthermore, the OCXO time base allows far more accurate frequency measurements and displays.

Option 0020: Ultra Low Noise Pre-Amp

Additional 20 dB of gain.

Option: RF over Fiber

Aaronia's RF over Fiber solution impresses with its extremely high dynamics and linear frequency response. This makes it possible for the first time to transmit or receive RF signals 1:1 via fiber optics offering ultra-low cable damping of 0,1 dB per km (single mode required).
